R. Tee Williams : An Introduction to Trading in the Financial Markets: Technology: Systems, Data, and Networks before purchasing it in order to gauge whether or not it would be worth my time, and all praised An Introduction to Trading in the Financial Markets: Technology: Systems, Data, and Networks:

3 of 3 people found the following review helpful. A good introduction to Financial Markets By Stuart J McIntosh Although I've been in the Financial Industry for many years, I've known that there are gaps in my knowledge, and this book helped to fill them. I was looking for a step-by-step description of the Trading Process, and this book had what I was looking for (although I'll be waiting for the subsequent books in the set to provide more detail). I can now explain the difference between clearing and settlement. I also liked the fact that it had clear definitions for terms such as 'Prime Broker' and 'Wholesalers' and had good diagrams that showed the relationship between the different components that make up the industry on both the buy and sell side. I'd highly recommend this book as a good overview of the Financial Industry. My only minor complaint is that sometimes I felt that the diagrams tended to overwhelm the text. -Stuart.

Networks, systems, and data join the financial markets into a single interrelated environment that processes millions of transactions in real time. This volume, the third of four, investigates the interconnected nature of financial markets by examining networks, systems, and data in turn. Describing what technologies do instead of how they work, the book shows how they drive each step of the trading process. We learn why the speed and scope of financial automation are growing, and we observe the increasing importance of data in the regulatory process. Contributing to these explanations are visual cues that guide readers through the material. If knowledge comes from information, then this volume reveals much about the core of the finance industry. Explains how technologies and data make the financial markets one of the most automated industries. Describes how each step in the trading process employs technology and generates information. Presents major concepts with graphs and easily understood definitions.

From the Back Cover Networks, systems, and data join the financial markets into a single interrelated environment that processes millions of transactions in real time.
