**Sukumar Nandi : Economics of the International Financial System** before purchasing it in order to gage whether or not it would be worth my time, and all praised Economics of the International Financial System:

Economics of the International Financial System offers an illuminating, engaging and lucid account of the working of 21st-century global political economy. From a macroeconomic perspective, it explores how major capitalist economies are closely integrated with each other in that none can remain unaffected by economic events around the globe. The book is one of the first in its genre to examine: the origin and relevance of international money as a concept and phenomenon; the structure of various money markets; the nature and functioning of major international financial institutions such as the World Bank, International Monetary Fund (IMF) and International Bank for Reconstruction and Development (IBRD); and the dynamics of the new world financial system that emerged after the demise of

Bretton Woods system. This will form an essential reading for students and scholars of international monetary economics, international corporate finance, researchers, policymakers, bankers and financial executives.

“A very useful treatise. Up-to-date and comprehensive in coverage, this will be indispensable to students and policymakers as also those interested in the management of a modern economy with cross-country spillovers.”  
Kajal Lahiri, Distinguished Professor of Economics, State University of New York  
About the Author  
Sukumar Nandi is Professor of Economics, Indian Institute of Management, Lucknow.
