**Davis W. Edwards : Energy Investing DeMystified: A Self-Teaching Guide** before purchasing it in order to gage whether or not it would be worth my time, and all praised Energy Investing DeMystified: A Self-Teaching Guide:

3 of 4 people found the following review helpful. Fantastic Study Guide for GARP ERP ExamBy ColinThis is a fantastic book, but the title is misleading: this is not a handbook for prospective traders - it is a handbook for RISK MANAGERSFirst, and foremost, this is a study guide for the GARP ERP certification (Global Assoc of Risk Professionals, Energy Risk Professional.) It also has a lot of relevance for CFA and NASD Series 3 exams. The writing is clear, concise, and comprehensive. It explains all the concepts you need. It has a lot of sample questions and answers.If you are going to buy one guide for the GARP/ERP exam: Buy this one.Second, this is a valuable introduction for veterans of the financial services industry who need to learn more about commodity/energy products. It is pitched at a very good level for someone in risk management, middle office, valuation control or technology moving over to a commodities/energy role to quickly come up to speed with major concepts and terminology. If you work at an investment bank, hedge fund, or a related industry (financial analyst, auditor, regulator), this is a good way

to get up to speed very quickly. The concepts, examples and material in this is book are accurate, well explained and up to date. It is excellent at what it does, but the title should have been: "Energy Risk Professional"

DeMystified (disclaimer: I work as a professional programmer and project manager at JP Morgan; previously having worked at Goldman-Sachs.) 3 of 4 people found the following review helpful. Not really a book on energy investing, but it is possibly? By C. Drouganis Sorry for the confusing title, it is appropriate for a book that is laid out in this fashion. It begins with a primer on energy types and transportation. Oil, gas, ethanol, tankers etc. Then there is a primer on different types of investments, stocks, options, bonds and derivatives. Then the books over. There is nothing tying everything together to show the reader information on actually investing in these markets. There is nothing showing the reader where to go to make such investments no heuristics or hard won information on these types of investing. Basically nothing related to the title of the book. You can find any and all of this information on Wikipedia or Investopedia.

FUEL your portfolio with SMART ENERGY INVESTING ELECTRICITY. BIO-FUELS. NATURAL GAS. OIL. They power the world. And if you know what you're doing, they can power your investment portfolio. Energy Investing DeMYSTiFieD provides the information, insight, and tools you need to immediately start investing in this exciting industry.
