**Stevenson : Operations Management (McGraw-Hill Series in Operations and Decision Sciences)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Operations Management (McGraw-Hill Series in Operations and Decision Sciences):

1 of 1 people found the following review helpful. Applicable and well organized  
By Megan  
This is definitely one of the better textbooks I've used. I was surprised to see that the content wasn't over the top academic. Instead, the content aligned well to real world business practices but was still well organized, connected clearly to relevant theories, and was easy to digest.  
0 of 0 people found the following review helpful. MBA level text  
By The Helpful Dad  
This book is ok. We used it for an MBA class. It's heavy on math/excel and if that interests you then you will probably enjoy it. The professor for our class was so bad that admittedly I'm probably taking it out on the rating for this book too - sorry.  
0 of 0 people found the following review helpful. I'm taking a graduate course in OM. This book ...  
By Rene Brenes  
I'm

taking a graduate course in OM. This book covers all the topics as required. However, sometimes the concepts are not so clear, but at the same time it is filled with examples about real-world issues and problem solving techniques.

Stevenson's Operations Management features integrated, up-to-date coverage of current topics and industry trends, while preserving the core concepts that have made the text the market leader in this course for over a decade. Stevenson's careful explanations and approachable format support students in understanding the important operations management concepts as well as applying tools and methods with an emphasis on problem solving.

**About the Author** Dr. Stevenson is an associate professor of Decision Sciences in the College of Business at Rochester Institute of Technology. He teaches graduate and undergraduate courses in production/operations management, management science, quality concepts, and quality applications. He is the author of textbooks in management science, statistics, as well as production/operations management. His articles have appeared in Management Science and Decision Sciences. He also serves as a consultant to the New York State Regents External Degree program. His current research interests are in quality applications. Dr. Stevenson received a bachelor's degree in industrial engineering, and an M.B.A. and a Ph.D. in production/operations management from Syracuse University.
