Tired of investing the right way; only to see years of gains evaporate in mere months? Worried about the potential danger in the stock market right now? Concerned that stubborn politicians or central bankers in Washington will do something boneheaded to derail your retirement? It's time to seize your financial destiny. In his new book,

Moneynews Financial Editor Andrew Packer, author of the runaway bestseller *Aftershock's High Income Guide*, explores the potential economic future likely caused by today's sky-high government deficits and central bank easing policies. He brings timeless investment wisdom and applies it to today's markets. That future is unknown, and could even be ugly for investors. But in *Uncharted*, Packer reveals: Why most people are their own worst enemies when it comes to buying and selling stocks How to find winning investments in oversold markets A simple step-by-step guide to analyzing investment opportunities The assets you'll need to thrive over the next few years, and why you'll need them The dangers posed by Wall Street and Uncle Sam and how to beat both at their own game

In *Uncharted*, Andrew Packer reveals the fragile and unique situation that pervades the globe right now. He then ties together the main threads necessary to create a successful investment tapestry: rigorous analysis, a global macroeconomic view, and the psychological behavior of the people who make up the market, and combines these elements in a way that accentuates the best of each of these investment strategies while minimizing their downsides. -- Bob Wiedemer
